DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Craig A. Summerfield on March 8, 2004.

The application has been amended as follows:

Claim 21, on line 1, " claim 12 " should read -- claim 13 --.

Old abstract is canceled. New abstract: -- A circuit arrangement for generating an X-ray tube voltage is described, wherein a switching device, connected downstream of a voltage controller (G_{su}) and a oscillating current controller (G_{ri}), operable to compare a first controlling variable value (Y u(t)) and a second controlling variable value (Y z(t)) and is operable to send the lesser of the first and second controlling variable values (Y u(t) and Y z(t) onward as a resultant controlling variable value (Y (t)) to the inverse rectifier circuit (G_{si}). --

Allowable Subject Matter

- 2. Claims 1-22 are allowed.
- 3. The following is an examiner's statement of reasons for allowance:

Art Unit: 2882

Claims 1-12 are allowed because prior art fails to teach or make obvious a circuit arrangement, for generating an X-ray tube voltage comprising a switching device, connected downstream of a voltage controller (G_{su}) and a oscillating current controller (G_{ri}), operable to compare a first controlling variable value ($Y_{u(t)}$) and a second controlling variable value ($Y_{z(t)}$) and is operable to send the lesser of the first and second controlling variable values ($Y_{u(t)}$) and $Y_{z(t)}$ onward as a resultant controlling variable value ($Y_{u(t)}$) to the inverse rectifier circuit ($Y_{u(t)}$) as claimed.

Claims 13-22 are allowed because prior art fails to teach or make obvious a method for generating an X-ray tube voltage comprising comparing a first controlling variable value (Y i(t)) and a second controlling variable value (Y i(t)) via a switching device, the switching device being connected downstream of the voltage controller (GRu) and an oscillating current controller (G ri), and sending the lesser of the first and second controlling variable values (Y u(t) and Y i(t)) onward as a resultant controlling variable value (Y(t)) to the inverse rectifier circuit (Gsi) as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Franke et al. (US Patent 4,266,134), Sato et al. (US Patent

4,450,577), Carron (US Patent 4,680,693) and Salesses et al. (US Patent 4,809,310) disclose the circuit arrangement for generating X-ray tube voltage.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Irakli Kiknadze whose telephone number is 571-272-2493. The examiner can normally be reached on 9:00- 5:30.
